

Public note

Bruno Pedro

Wednesday, April 6, 2022

It is my belief that this new ability to represent ideas in the fullness of their interconnections will lead to easier and better writing, easier and better learning, and a far greater ability to share and communicate the interconnections among tomorrows ideas and problems. Hypertext can represent all the interconnections an author can think of, and compound hypertext can represent all the interconnections *many* authors can think of, as we shall see.
