Bruno Pedro

Friday, February 11, 2022

There is a secret that needs to be understood in order to write good software documentation: there isn't one thing called *documentation*, there are four.

They are: *tutorials*, *how-to guides*, *technical reference* and *explanation*. They represent four different purposes or functions, and require four different approaches to their creation. Understanding the implications of this will help improve most documentation - often immensely.
