Saturday, January 22, 2022

`fswatch` is a file change monitor that receives notifications when the contents of the specified files or directories are modified. `fswatch` interacts with the operating system using a *monitor*.

You can use `fswatch` to actively monitor a folder and push any changes to GitHub automatically.

Found on Introduction (fswatch 1.16.0) on 2022-01-22 19:50:42.
